

**POLR**  
RESOURCE EVENTS

# The Ultimate Way to Monitor your Equipment

How much money is idle equipment costing you? **POLR Resource Events** increases visibility of idle resources for reporting and analysis to enable increased productivity and profitability.

**PATH  
OF  
LEAST  
RESISTANCE**

**POLR Resource Events** enhances effective decision making to optimise your fleet. Increase transparency of upcoming service requirements and resource availability across your crews; and add comments against delays, incidents and components for *transparency* across departments.

## BENEFITS

Enables ability to  
optimise your  
resources

Minimizes human  
error

Saves valuable  
time

Practical & easy  
to use

Increases  
visibility

Delivers greater  
accuracy

Increases  
efficiency &  
profitability

Processes data in  
near real time

# Real Time Data at Your Fingertips

Unscheduled downtime, scheduled maintenance and weather delay are just some of the events that affect resource availability. This resource data flows through to **POLR Resource Events** in near real-time enabling analysis and decision making to be carried out efficiently with data from one, central location.

**"We've moved away from the time-consuming exercise of capturing and recording data into spreadsheets to interpreting the data at our plant to make better decisions about maintenance and operations."**

With **POLR Resource Events** automated reporting, it's easy to analyse data for specific time frames. This enables you to identify trends for equipment and implement processes to ensure your fleet is running at optimal capacity.

You can also export **POLR Resource Events** data to your analysis or reporting platform of choice for further analysis and manipulation.

Empower confidence in your analysis  
and decision making with  
**POLR Resource Events**
